HTML5/CSS3/JavaScript

Code is where the magic happens. It is what translates beautiful designs into fully functional and delightful websites.

UX Design

Whether mocking a project up in photoshop or going straight to code a prototype, the user is always in mind. Usability isn't a luxury, it's a necessity.

Web Applications

Single page web applications come to life using Backbone.js and Node.js. JavaScript isn't only for the front-end.

Workflow & Process

Workflow is an important process to every developer. Mine starts with understanding the purpose of a website or a web application. Understanding the scope of a project helps me determine the best tools for the project, whether the website needs to be c

From there I develope user stories and sketch designs to create a strong foundation for mockups and prototypes using photoshop or my favorite text editor.

After that, the fun begins with developing the project using my favorite tools.
